

[29/06, 10:44 pm] Interviewer:

David Shibin irsavel

Self intro

Powerbi project what did you implemented

SQL query

Windows function

,CTE

6th highest salary

Remove duplicate values

ETL concepts

SCD types with example

Normalisation

[29/06, 10:44 pm] Interviewer- Malakar Aritra

Introduce about yourself

Explain your IICS Project done in training

Explain ETL

Differences between delete,drop,truncate

Difference between DWH and Data Marts

Difference between fact table and dimension table

Explain types in fact table with examples

Differences Between OLAP and OLTP

What is Referential Integrity

Retrieve all the student details based on name in descending order

Retrieve the student names and age that name ends with a and age greater than 20

Retrieve the student names and age that name 3rd letter is a and age greater than 25

Take a table as first name last name write a query in sql to get first name and last name in one column full name

Write a query to get second highest salary

Union and Union all difference

Union and union all code explain

Scenario based sql query

Print reverse of your name

Print even numbers from 1 to 10

Where do you see yourself in next 3 years

Any Reallocation Preferences

[29/06, 10:44 pm] ---Interviewer-sangeetha

.introduction

.Explain about project

.What is the source of your data

.What is the use of your project and To whom
your project will be useful

.Hr question

.What is normalisation and its types

.Difference between olap and oltp

.Datawarehouse and data model Difference

.Fact and dimension table

Star schema and snowflake schema

[29/06, 10:44 pm] Interviewer:

Bodagala Mohan Balaji

Self intro

SQL commands

Window functions and their types

differences between olap and oltp

Dataware House and datamart

Difference between fact table and dimension table

What is SCD and their types

Difference between union and union all

What is null values

Incremental and full load

What is DAX?

Power query

Power pivot

How to find duplicate values in the table

Normalization

Difference between ETL and ELT

SQL joins and their types

Difference between calculate and measure

scenario based questions based on row number

About project

[29/06, 10:44 pm] Interview sahina parwin

What is merge and appen in power bi?

Deadlock?

Recursive?

Difference delete, drop and truncate?

What decorated and dunder?

Normalisation?

ACID properties?

Denormalisation?

List and tuple?

Set and dictionaries?

What is mutable and immutable?

What are the components of power bi?

How you improve the performance of your dash board?

What is dax?

Difference between sum and sumx?

Difference filter and calculate?

What is calculated column?

If your dashboard shows duplicate values in the sales after deployed to customer. What will you do remove the duplicates?

How will you find profit, averagex, sales growth and what are the visual will you use to show?

difference directquery and import mode?

Why we use indentation in python?

In your opinion, which type of import would you prefer in Power BI, and why?

What are the different types of relationship in power bi and explain about it?

Starschema and snowflake schema?

[29/06, 10:50 pm] Dineshkumar udayashankara:

Tell me about yourself

About project

Normalisation and denormalization

Joins

What is data warehouse

Primary key and foreign key

SCD and it's types

[29/06, 10:57 pm] Saswati Karmakar -

Briefly explain your project

Where, Having, difference between them

Types of joins,

Difference between inner join and left outer join

Write a query to find duplicate records in a table

List, tuple, set

Which one is faster between list and tuple

How can we Reverse a string in python, write the code

Explain Iaas, Paas, Saas with examples

What is Scalability and Elasticity

Difference between Traditional ML and Generative AI

What is RDD and Dataframe

Lazy evaluation

Transformation and action

SCD, types, explain each

star schema and snowflake schema

Phases of SDLC

Prompt engineering

Good prompt and their characteristics

[29/06, 10:57 pm] Krishnakumar srinivasan

How will u ensure consistency data

Handling null values in pyspark

Group by in sql

Project explanation

Lamba in python

List and tuple

1. Update values of a table from another table.
2. Query unique values
3. Query department which has more than 5 employees
4. Print prime numbers
5. Remove special characters from a string, use try except block

Tableau: 1. Types of filters 2. Types of

aggregation 3. Types of connections 4. Types of charts 5. How to create dashboard 6. Write the calculated field to find sales on last 90 days 7. Types of Joins in tableau 8. advantages of tableau What is ETL ETL process What is join and it's types Write query using inner join Explain ddl, dml, TCL, dcl, dql Tableau Project What is Calculated field What is DW What is ETL Sum of sales in the month of January Select employee whose salary is 30k How do you write List, Tuples, Dictionary, Sets Rank vs DenseRank

TABLEAU INTERVIEW QUESTIONS (FRESHER)

SECTION 1: TABLEAU BASICS

1. What are the data types supported in Tableau? 2. What do you understand by Dimensions and Measures? 3. What do you understand by Discrete and Continuous? 4. What are Filters? Name the different types of Filters. 5. What is a Calculated Field? How do you create one? 6. What is the difference between Live Connection and Extract

Connection? SECTION 2: DATA SOURCE &

MODELING 7. What are the different types of Joins in Tableau? Explain with examples. 8.

What is the difference between Join and

Blending? 9. How do you handle Null values and other special values? 10. What will you do if a country/state is showing Null on a Map?

SECTION 3: TABLEAU OBJECTS 11. Explain the difference between Worksheet, Dashboard,

Story, and Workbook. 12. What is the difference between .twb and .twbx files? 13. How can you

embed a webpage into a Tableau Dashboard?

SECTION 4: CALCULATIONS & FUNCTIONS 14.

What is the Rank Function in Tableau? 15. What is an LOD (Level of Detail) Expression? 16. What

will LEFT("Tableau",3) return? 17. How do you display Top 5 and Bottom 5 Sales in the same

view? SECTION 5: GROUPS & SETS 18. What is the difference between Groups and Sets? 19.

When should you use Groups instead of Sets?

SECTION 6: CHARTS & VISUALIZATION 20. What is the difference between Treemap and Heatmap? 21. Which visualization would you use in different business scenarios? 22. Design a view to show Region-wise Sales and Profit.

SECTION 7: AXIS 23. What is a Blended Axis? 24. What is a Dual Axis? How do you create it?

SECTION 8: DASHBOARD PERFORMANCE 25. How do you optimize the performance of a Tableau Dashboard?

SECTION 9: PRACTICAL SCENARIO QUESTIONS 26. Three customer segments exist in the Superstore dataset. What percentage of the total profit comes from the Corporate segment? 27. Find the Top Product Sub-Category by Sales within each Delivery Mode. 28. Which Sub-Category is ranked #2 in First-Class Ship Mode? 29. Find the customer with the lowest overall profit. What is the Profit Ratio?

MOST IMPORTANT QUESTIONS

- Dimensions vs Measures
- Discrete vs

Continuous â€¢ Types of Filters â€¢ Joins â€¢
Join vs Blending â€¢ Live vs Extract â€¢
Calculated Fields â€¢ Groups vs Sets â€¢
Treemap vs Heatmap â€¢ Worksheet vs
Dashboard vs Story vs Workbook â€¢ .twb vs
.twbx â€¢ Rank Function â€¢ LOD Expressions
â€¢ Dual Axis â€¢ Dashboard Performance
Optimization â€¢ Null Handling â€¢ Top N &
Bottom N â€¢ Practical Dashboard Scenarios
datawarehouse vs datamart star vs snowflakes
scheme normalized vs renormalization scd and
types etl tools transformation in etl and types
connected unconnected aggregate function
what is Dax function cardinality in power bi what

variable) continue, break, pass for loop and while
loop args and kwargs / vs // static method vs
dynamic method Interviewer:Mahendra
Chidipothu 1.SCD 2.Diff between type 2 and type
3 SCD 3.Most of the time which type of SCD is
used in real time 4.What is DSS 5.Normalization
and it's type 6.diff between primary and foreign
key 7.What is unique key 8.What is index and
types of index(clustered, non clustered, b tree,
bitmap) 9.what is view and materialized view
10.What is star and snowflake schema 11.what
is difference between union, union all, intersect
and minus 12.what is the difference between left

outer join and right outer join 13.How to delete duplicate records from a table 14.To find the 2nd and 5th highest salary what function will you use? 15.Tell me the sequence of group by, order by and having 16.commands in sql 17.Suppose I need to delete a table. Again will it be possible to revoke? 18.when it will not be possible to revoke? 19.What is the difference between commit and roll back? 20.mostly which DDL command you use in real time? 21.what is the difference between stored procedures and function 22.what is derived tables 23.what is the source of your project? 24.what is concatenation in python 25.can we pass a function as an argument in python? 26.what is pass in python 27.difference between break and pass 28.what are the built in data types in python 29.scope of variables in python(global and local variables) 30.difference between list and tuple 31.how to debug python program 32.in python which

database you need to connect 33.what is agile
34.difference between waterfall and agile model
35.how to test that your code is validated or not
in azure or python 36.Have you done any manual
test cases? Interviewer : Mahendra chidipothu 1.
Explain about your project 2. What are the
components in azure data factory 3. Have you
cleaned your data 4. How will you identify the
null and duplicate values in your file. is there any
specific tool or services is there for that 5. Sql
commands 6. How to delete a duplicate rows in
a table 7. Primary key, foreign key, unique key 8.
Diff between primary and unique 9. Diff btw
foreign key and unique 10. Diff btw primary and
foreign key 11. Index 12. Where you will use
index 13. What is view and materialized view 14.
Diff btw view and materialized view 15. How to
find the third highest salary 16. Sdlc 17. Agile
18. Snowflake and star schema 19. Diff btw
snowflake and star schema 20. scd and types

21. Have you used python in azure 22. Azure synapse 23. Azure data bricks 24. He asked me about PL sql i said we haven't trained on pl sql 25. Again he asked qns based on project like what is the outcome of this project ,what are the services you used 26. What database did you used in you project 27. What database azure will support (my sql, cosmos db, oracle) 28. What is pipeline 29. What is copy activity 30. How you connect you database to azure 31. What is the purpose of index 32. Union , union all , minus , intersection Interviewer:Mahendra Chidipothu 1.SCD 2.Diff between type 2 and type 3 SCD 3.Most of the time which type of SCD is used in real time 4.What is DSS 5.Normalization and it's type 6.diff between primary and foreign key 7.What is unique key 8.What is index and types of index(clustered, non clustered, b tree, bitmap) 9.what is view and metarialized view 10.What is star and snowflake schema 11.what is

difference between union, union all, intersect and minus 12.what is the difference between left outer join and right outer join 13.How to delete duplicate records from a table 14.To find the 2nd and 5th highest salary what function will you use? 15.Tell me the sequence of group by, order by and having 16.commands in sql 17.Suppose I need to delete a table. Again will it be possible to revoke? 18.when it will not be possible to revoke? 19.What is the difference between commit and roll back? 20.mostly which DDL command you use in real time? 21.what is the difference between stored procedures and function 22.what is derived tables 23.what is the source of your project? 24.what is concatenation in python 25.can we pass a function as an argument in python? 26.what is pass in python 27.difference between break and pass 28.what are the built in data types in python 29.scope of variables in python(global and local variables)

30.difference between list and tuple 31.how to debug python program 32.in python which database you need to connect 33.what is agile 34.difference between waterfall and agile model 35.how to test that your code is validated or not in azure or python 36.Have you done any manual test cases? Interviewer : Mahendra chidipothu 1. Explain about your project 2. What are the components in azure data factory 3. Have you cleaned your data 4. How will you identify the null and duplicate values in your file. is there any specific tool or services is there for that 5. Sql commands 6. How to delete a duplicate rows in a table 7. Primary key, foreign key, unique key 8. Diff between primary and unique 9. Diff btw foreign key and unique 10. Diff btw primary and foreign key 11. Index 12. Where you will use index 13. What is view and materialized view 14. Diff btw view and materialized view 15. How to find the third highest salary 16. Sdlc 17. Agile

18. Snowflake and star schema 19. Diff btw snowflake and star schema 20. scd and types 21. Have you used python in azure 22. Azure synapse 23. Azure data bricks 24. He asked me about PL sql i said we haven't trained on pl sql 25. Again he asked qns based on project like what is the outcome of this project ,what are the services you used 26. What database did you used in you project 27. What database azure will support (my sql, cosmos db, oracle) 28. What is pipeline 29. What is copy activity 30. How you connect you database to azure 31. What is the purpose of index 32. Union , union all , minus , intersection Interviewer:Mahendra Chidipothu 1.SCD 2.Diff between type 2 and type 3 SCD 3.Most of the time which type of SCD is used in real time 4.What is DSS 5.Normalization and it's type 6.diff between primary and foreign key 7.What is unique key 8.What is index and types of index(clustered, non clustered, b tree, bitmap)

9.what is view and metarialized view 10.What is star and snowflake schema 11.what is difference between union, union all, intersect and minus 12.what is the difference between left outer join and right outer join 13.How to delete duplicate records from a table 14.To find the 2nd and 5th highest salary what function will you use? 15.Tell me the sequence of group by, order by and having 16.commands in sql 17.Suppose I need to delete a table. Again will it be possible to revoke? 18.when it will not be possible to revoke? 19.What is the difference between commit and roll back? 20.mostly which DDL command you use in real time? 21.what is the difference between stored procedures and function 22.what is derived tables 23.what is the source of your project? 24.what is concatenation in python 25.can we pass a function as an argument in python? 26.what is pass in python 27.difference between break and pass 28.what

are the built in data types in python 29.scope of variables in python(global and local variables)
30.difference between list and tuple 31.how to debug python program 32.in python which database you need to connect 33.what is agile
34.difference between waterfall and agile model 35.how to test that your code is validated or not in azure or python 36.Have you done any manual test cases? Vidya- explain what is pk , fk, composite key, aggregate function,sql query how to get duplicates from table,joins , self join , index in sql , difference between drop and delete, what is etl , normalisation, azure servise , what is blob storage, increment load and full load , sdhc , sdhc framwork, build in datatype in python , what is list, what is tuple , difference between list and tuple 1. Self intro 2. Sql joins 3. Cross join 4. Transaction and purpose 5. How to handle null values in sql 6. Rank and dense rank 7. Python command 8. Etl 9. Sdhc 10. Copilot 11. How will

give prompt for this question 12. Gen ai 12.
Azure 13. How will you implement etl in azure
14. Azure data factory 15. Azure synapse 16.
Sdlc 17. Agile scrum, sprint 18. Sdlc phases 19.
Waterfall model 20. Agile model 21.
Normalisation and types 22. Scd and types 23.
Python commands 24. Data warehouse 25. How
to read a file 1. What is etl? 2. Referential
integrity 3. Sdlc 4. Testing phase 5. Group by and
having difference 6. Create SparkSession 7.
Create dataframe 8. List, tuple and set 9.
Window functions 10. Window function syntax
11. Explain etl in depth 12. Handling null values
in pyspark 13. Fetch highest salary 14. Partition
by 15. Lazy evaluation 16. Syntax for creating
rdd What is spark How it is different from
hadoop Transformations and actions What is
rdd Fact table and dimension table SCD What is
data lake What is delta lake Difference between
primary key and foreign key What is cloud

computing What is azure Cacheing in data bricks ACID properties What is azure data factory Binu Sekhar 1. Project and what tech used, objective, format of the file used in project(csv) 2. â components of adf used in ingesting the csv into data factory 3. â how do you configure copy activity in adf(settings while uploading-source and sink, linked service) 4. â have you scheduled the pipeline to run? 5. â trigger 6. â python packages- pandas, numpy 7. â difference between python and pyspark 8. â data structures and data types in python 9. â difference between list and tuple 10. â exception handling 11. â normalisation and types 12. â when creating data source for reporting, which form of data is best- normalised data or denormalised? 13. â difference and similarities between data marts and data warehouse 14. â what is a data lake? How is it similar/different from data warehouse? 15.

16. what is azure
Databricks 17. how do you run spark jobs
inside azure data factory? 18. how to print
only the name of employee with the third highest
salary in sql 19. window functions(difference
between row number, rank, dense rank) 20.
difference between delete and truncate Ajita
Wanaskar: Project What is python Mutable vs
immutable with examples Exception handling

do u handel null values Window fnts- rank, dense
rank joins Vidya George - Interviewer Sql all
concepts in depth What is SQL Joins : Types of

joins How Inner join is different from Left Outer Join She gave one scenario like 2 tables and asked join question to check your understanding What is index, why indexing is used? What is primary key and what is foreign key Difference between delete and Drop Aggregate function and question related to max salary She was asking what you learned throughout your project Just mention the concepts which you are familiar with ETL: What is ETL explain What is data warehouse, Concepts related to data warehouse What is incremental and full load I mentioned SDLC, so asked questions related to it Azure , basic concepts related to it and also asked Databricks Vidya- explain what is pk , fk, composite key, aggregate function,sql query how to get duplicates from table,joins , self join , index in sql , difference between drop and delete, what is etl , normalisation, azure servise , what is blob storage, increment load and full load , sdlc ,

sdic framwork, build in datatype in python , what is list, what is tuple , difference between list and tuple Interviewer: Monalisha 1. Self intro and what u studied up to now as a part of training 2. About sql (overview) and database 3. How to handle null values in sql and do query 4. What are integrity constraints? 5. Database objects 6. Data warehouse 7. ETL and role of ETL in data warehouse 8. Query to display the highest salary 9. Query to fetch salary based on dept 10. Joins in pyspark using dataframe 11. Snowflake and star schema, and what is used in real-time 12. OLAP 13. Normalisation and types 14. Fact and dimensions 15. What is the fact table and dimension table 16. CTE and how it is useful? 17. Difference between group by, partition by and over() clause -> window function 1. Self intro 2. Sql joins 3. Cross join 4. Transaction and purpose 5. How to handle null values in sql 6. Rank and dense rank 7. Python command 8. Etl

9. Sdlc 10. Copilot 11. How will give prompt for this question 12. Gen ai 12. Azure 13. How will you implement etl in azure 14. Azure data factory 15. Azure synapse 16. Sdlc 17. Agile scrum, sprint 18. Sdlc phases 19. Waterfall model 20. Agile model 21. Normalisation and types 22. Scd and types 23. Python commands 24. Data warehouse 25. How to read a file Shree prakash Prasad (Mine) What is sql Command in sql Constraint 3rd highest salary What use for optimization -ans is - indexing and it's types List tuple and set Rank Row number Dense rank What is big data with example Window function Given - 900,800,700,700,600 now tell the rank dense rank and row number Syntax of window function About me About my project ETL 1. What is etl? 2. Referential integrity 3. Sdlc 4. Testing phase 5. Group by and having difference 6. Create SparkSession 7. Create dataframe 8. List, tuple and set 9. Window functions 10.

Window function syntax 11. Explain etl in depth 12. Handling null values in pyspark 13. Fetch highest salary 14. Partition by 15. Lazy evaluation 16. Syntax for creating rdd What is spark How it is different from hadoop Transformations and actions What is rdd Fact table and dimension table SCD What is data lake What is delta lake Difference between primary key and foreign key What is cloud computing What is azure Cacheing in data bricks ACID properties What is azure data factory Binu Sekhar 1. Project and what tech used, objective, format of the file used in project(csv) 2. â components of adf used in ingesting the csv into data factory 3. â how do you configure copy activity in adf(settings while uploading- source and sink, linked service) 4. â have you scheduled the pipeline to run? 5. â trigger 6. â python packages- pandas, numpy 7. â difference between python and pyspark 8.

• data structures and data types in python 9.

• difference between list and tuple 10.

• exception handling 11. • normalisation and types 12. • when creating data source for reporting, which form of data is best- normalised data or denormalised? 13. • difference and similarities between data marts and data warehouse 14. • what is a data lake? How is it similar/different from data warehouse? 15.

• azure services 16. • what is azure Databricks 17. • how do you run spark jobs inside azure data factory? 18. • how to print only the name of employee with the third highest salary in sql 19. • window functions(difference between row number, rank, dense rank) 20.

• difference between delete and truncate Ajita Wanaskar: Project What is python Mutable vs immutable with examples Exception handling Normalization SCD Indexing SQL scenario based on referential integrity Datawarehouse vs Data

mart Datawarehouse architecture Interviewer :
Ajita wanaskar Questions: Asked to show
project doc How do you rate yourself in sql now?
What is referential integrity? And it's example
Suppose there is data in parent table and child
table and I want delete my data from parent
table, will i able to delete it? DDL,DML,DCL,TCL
Difference between drop,truncate and delete If I
delete some of my data from my table using
delete command and do the rollback will it
rollback? Types of joins and asked to elaborate
each one. Write query for cross join. When you
are performing a cross join, do you provide any
joining condition? What is subquery? It's types
What is index? How do you rate yourself in
python? What is Python? What is Mutable and
Immutable data objects? And it's examples What
are the different statement that you can use for
decision making? What is file handling? What is
exception handling? Suppose there are three

modules a,b and c and while executing the program at model be some exception occurred, will it go the module 3 or it will come out of 2 and show some message? What is cc? Different challenges we faced during CC? What is ETL architecture? Purpose of staging area? Can we perform any transformation in staging area?

Interviewer:Mahendra Chidipothu 1.SCD 2.Diff between type 2 and type 3 SCD 3.Most of the time which type of SCD is used in real time 4.What is DSS 5.Normalization and it's type 6.diff between primary and foreign key 7.What is unique key 8.What is index and types of index(clustered, non clustered, b tree, bitmap) 9.what is view and metarialized view 10.What is star and snowflake schema 11.what is difference between union, union all, intersect and minus 12.what is the difference between left outer join and right outer join 13.How to delete duplicate records from a table 14.To find the 2nd

and 5th highest salary what function will you use? 15. Tell me the sequence of group by, order by and having 16. commands in sql 17. Suppose I need to delete a table. Again will it be possible to revoke? 18. when it will not be possible to revoke? 19. What is the difference between commit and roll back? 20. mostly which DDL command you use in real time? 21. what is the difference between stored procedures and function 22. what is derived tables 23. what is the source of your project? 24. what is concatenation in python 25. can we pass a function as an argument in python? 26. what is pass in python 27. difference between break and pass 28. what are the built in data types in python 29. scope of variables in python(global and local variables) 30. difference between list and tuple 31. how to debug python program 32. in python which database you need to connect 33. what is agile 34. difference between waterfall and agile model

35.how to test that your code is validated or not in azure or python 36.Have you done any manual test cases? Interviewer : Princy Verma Questions : Sdlc Agile and all of its components Project details Adf Adf components College project or Technology that you worked on Aggregate functions Scd 1 vs scd 2 Dataware house Power bi basic Etl and elt Ddl vs dml Sql query syntax Where clause use case and syntax Sql queries When to use where before group by or after Diff between where group by having Subhashish bala: Second largest salary Reverse string - Slicing Rdd Hallucinations Tokens Gen Ai mainly Embeddings Definations dbms Python basics - tuple dict Elaborate your project Subashish bala--- Self intro Ur training experience Python-- string reverse (different ways he asked) Sql-- inner join outer join Primary key Foreign key Final year project -deep Machine learning Cnn Ml vs gen ai Hallucinations Fine tuning Iaas paas

saas examples real time (normal example) Real use cases of iaas paas saas Responsible gen ai define Llm working process Interviewer :

Mahendra chidipothu 1. Explain about your project 2. What are the components in azure data factory 3. Have you cleaned your data 4. How will you identify the null and duplicate values in your file. is there any specific tool or services is there for that 5. Sql commands 6. How to delete a duplicate rows in a table 7. Primary key, foreign key, unique key 8. Diff between primary and unique 9. Diff btw foreign key and unique 10. Diff btw primary and foreign key 11. Index 12. Where you will use index 13. What is view and materialized view 14. Diff btw view and materialized view 15. How to find the third highest salary 16. Sdlc 17. Agile 18. Snowflake and star schema 19. Diff btw snowflake and star schema 20. scd and types 21. Have you used python in azure 22. Azure

synapse 23. Azure data bricks 24. He asked me about PL sql i said we haven't trained on pl sql 25. Again he asked qns based on project like what is the outcome of this project ,what are the services you used 26. What database did you used in you project 27. What database azure will support (my sql, cosmos db, oracle) 28. What is pipeline 29. What is copy activity 30. How you connect you database to azure 31. What is the purpose of index 32. Union , union all , minus , intersection Interviewer:Mahendra Chidipothu 1.SCD 2.Diff between type 2 and type 3 SCD 3.Most of the time which type of SCD is used in real time 4.What is DSS 5.Normalization and it's type 6.diff between primary and foreign key 7.What is unique key 8.What is index and types of index(clustered, non clustered, b tree, bitmap) 9.what is view and metarialized view 10.What is star and snowflake schema 11.what is difference between union, union all, intersect

and minus 12.what is the difference between left outer join and right outer join 13.How to delete duplicate records from a table 14.To find the 2nd and 5th highest salary what function will you use? 15.Tell me the sequence of group by, order by and having 16.commands in sql 17.Suppose I need to delete a table. Again will it be possible to revoke? 18.when it will not be possible to revoke? 19.What is the difference between commit and roll back? 20.mostly which DDL command you use in real time? 21.what is the difference between stored procedures and function 22.what is derived tables 23.what is the source of your project? 24.what is concatenation in python 25.can we pass a function as an argument in python? 26.what is pass in python 27.difference between break and pass 28.what are the built in data types in python 29.scope of variables in python(global and local variables) 30.difference between list and tuple 31.how to

debug python program 32.in python which
database you need to connect 33.what is agile
34.difference between waterfall and agile model
35.how to test that your code is validated or not
in azure or python 36.Have you done any manual
test cases? Arithra Malakar Basic sql questions

TABLEAU INTERVIEW QUESTIONS (FRESHER)

SECTION 1: TABLEAU BASICS

1. What are the data types supported in Tableau?
2. What do you understand by Dimensions and Measures?
3. What do you understand by Discrete and Continuous?
4. What are Filters? Name the different types of Filters.
5. What is a Calculated Field? How do you create one?
6. What is the difference between Live Connection and Extract Connection?

SECTION 2: DATA SOURCE & MODELING

7. What are the different types of Joins in Tableau? Explain with examples.
- 8.

What is the difference between Join and Blending? 9. How do you handle Null values and other special values? 10. What will you do if a country/state is showing Null on a Map?

SECTION 3: TABLEAU OBJECTS 11. Explain the difference between Worksheet, Dashboard, Story, and Workbook. 12. What is the difference between .twb and .twbx files? 13. How can you embed a webpage into a Tableau Dashboard?

SECTION 4: CALCULATIONS & FUNCTIONS 14. What is the Rank Function in Tableau? 15. What is an LOD (Level of Detail) Expression? 16. What will LEFT("Tableau",3) return? 17. How do you display Top 5 and Bottom 5 Sales in the same view? SECTION 5: GROUPS & SETS 18. What is the difference between Groups and Sets? 19. When should you use Groups instead of Sets?

SECTION 6: CHARTS & VISUALIZATION 20. What is the difference between Treemap and Heatmap? 21. Which visualization would you

use in different business scenarios? 22. Design a view to show Region-wise Sales and Profit.

SECTION 7: AXIS 23. What is a Blended Axis?

24. What is a Dual Axis? How do you create it?

SECTION 8: DASHBOARD PERFORMANCE 25.

How do you optimize the performance of a

Tableau Dashboard? SECTION 9: PRACTICAL

SCENARIO QUESTIONS 26. Three customer

segments exist in the Superstore dataset. What

percentage of the total profit comes from the

Corporate segment? 27. Find the Top Product

Sub-Category by Sales within each Delivery

Mode. 28. Which Sub-Category is ranked #2 in

First-Class Ship Mode? 29. Find the customer

with the lowest overall profit. What is the Profit

Ratio? MOST IMPORTANT QUESTIONS â€¢

Dimensions vs Measures â€¢ Discrete vs

Continuous â€¢ Types of Filters â€¢ Joins â€¢

Join vs Blending â€¢ Live vs Extract â€¢

Calculated Fields â€¢ Groups vs Sets â€¢

Treemap vs Heatmap • Worksheet vs

python namespace(global variable, local
variable) continue, break, pass for loop and while
loop args and kwargs / vs // static method vs
dynamic method BI dashboard Life Cycle
Tableau Products and purpose of each product.
Data Source: Where data stored (Excel,
Database, cloud etc.,) Data connectors (type,
authentication etc.). Structure of data(tables,
joins relationships, metadata, custom SQL,
extracts etc..) Connection Type(Live and extract
purpose and type like hyper for extract).
VizSQL(Visual Query Language: Tableau's core
engine that translates each drag-drop actions
into SQL queries to the underlying database.
Helps in debugging dashboards, how tableau
converts relationships/LOD/Filters into SQL
Joins (inner, left, right, full), relationships, Cross

DB joins and Data Blending (Primary and secondary). Logical Layer (relationships-semantic level) -Dynamic query based on Viz Context. Physical Layer (joins)-Pre joined data (row level SQL joins) Tableau File types (.twb, .twbx, .tds, .tdsx, .hyper, .tbd, .tms, .tps etc.,) Tableau Layout and features: Data Pane, Marks Cards and Shelves, Show me Panel, Analytics, Dashboard objects Dimensions, measures, data types, Hierarchies, Bins, sets, groups- with examples. Types of charts with suitable examples- Purpose of the chart Filters- types- Precedence of filters and usage (Quick filter, Cascade, Context, Action etc.,) Parameters- Purpose and some use cases with examples- like default the Date parameter to last day of previous month (use DATEADD and DATETRUNC functions). Context Filter and how it works at data source level. Calculation fields -Purpose Index, different Rank functions with examples.

LOD-Fixed, Include and exclude with examples. Different String, date, window functions and their features/uses - like YTD, MTD, QTD, Previous year Vs Current year sales, YOY growth, MOM growth, lookup etc., Dimensions, measures, data types, Hierarchies, Bins, sets, groups- with examples. Types of charts with suitable examples- Purpose of the chart Filters- types- Precedence of filters and usage (Quick filter, Cascade, Context, Action etc.,) PFO t) Parameters- Purpose and some use cases with examples- like default the Date parameter to last day of previous month(use DATEADD and DATETRUNC functions). Context Filter and how it works at data source level. Calculation fields -Purpose Index, different Rank functions with examples. ant) LOD - Fixed, Include and exclude with examples. Different String, date, window functions and their features/uses - like YTD, MTD, QTD, Previous year Vs Current year sales,

YOY growth, MOM growth, lookup etc., Relative date Filter- ex: whenever you open dashboard, it will automatically show last month's data. Color palette :Sequential and diverging. How to set custom color in tableau. Dashboard Objects, dashboard actions Interviewer - Ashish Sikdar Self intro Tell all the things that you learn about tableau till date Fibonacci series Nth highest salary in 3 ways String manipulation Vowels count in 2 ways Titli dutta: subhashish bala Intro Primary and foreign key Composite key Lambda function When it is not recommended used lambda function. How do u implement error in file handling and exception handling Block of exception handling 2nd and 3rd highest salary using limit and offset Genai and machine learning Sdlc phases Types of cloud service model and example ETL process Difference between ETL and ELT Challenge of ETL process Interviewer - Ashish sikdar Self intro Tell me

what u know about tableau What is data warehouse with ex 3) Take 2 array merge it first using for loop and then sort it using second for loop 4) find product name start from A join two tables using product_id and display it 5) ETL explanation Princy Verma---- What do you think about Tableau? DBMS vs DW JOINS IN SQL Primary key and foreign key Surrogate key SCD and types Fact table and dimension table Inner Join and left join query Python Palindrome query *Feedback*-- you are so diligent, excellent, outstanding, superb, fantastic, splendid, awesome~ Aritra malakar - My interview questions Intro Projects Olap and oltp Composite primary key Data warehouse vs data marts Referential integrity Fact table dimensions Factless table Drop truncate delete sql Query- 2nd highest salary using subquery sql query- retrieve the student name whose first name starts with the "s" and age is greater than 20 sql query-

retrive the student name who is having "s" to the 4th place in the name sql query- there is two table table A having employee name, age and table B having the salary, name , age and using union all what will be the output Having where clause Python coding question - print the even number from 1-10 Etl concepts Star schema Snowflake scheme Composite key Like operator query Normalisation and de normalisation Hr questions - where you find yourself in next 3 years Aritra malakar - My interview questions Intro Olap and oltp Composite vs primary key Data warehouse vs data marts Referinal integrity Fact table dimensions Factless table Drop truncate delete sql Query- 2nd highest salary using subquery sql query- retrive the student name whose first name ends with the "A" and age is greater than 20 sql query- retrive the student name who is having "A" to the 4th place in the name sql query- there is two table table A

You don't know the technology for the new project do you accept that or wait for new project Ashish Sikdar :- Basics of tableau all within a week. CTE Using row_number delete duplicate records. Vowels and frequency. Fibonacci series Datawarehouse ETL explain subramanian hariharan-senior project manager (don't say real time example say if he asks) only name training experience topics covered sdhc load a dataset from outside using pyspark and write python code to give grade to person according to his marks what is gen ai what is use of gen ai and why should we use it what are cloud fundamentals gmail is a what type of

service model and why zoom is he will give some data and we need to write sql query (basics only but in a twisted way) Shruti senthilkumar: 1. Differentiate between drop and truncate 2. What is subquery in sql 3. Write a query using group by and explain the concept 4. What is referential integrity 5. Write a query to retrieve second highest salary using subquery 6. Order of execution in sql 7. Difference between list and array 8. Differentiate between for loop and while loop in python 9. What exception in python and how to handle it 10. What is indentation in python 11. Write a python code to check even or odd number 12. Cloud service models 13. What is CSA in cloud 14. Why do we need a database 15. What is OLTP 16. Difference between OLAP and OLTP 17. What is data warehouse 18. Fact table and dimension table 19. What is SCD, what is SCD type 2 20. What is data staging 21. What is data brick 22. What is

SDLC 23. Why is generative AI important in day to day life 24. What is Analytics and visualization 25. Basics from pyspark Interview Questions (Aritra Malakar)

1. Tell me about yourself.
2. Explain your academic project
3. What is the difference between OLAP and OLTP?
4. What is the difference between a Primary Key and a Composite Key?
5. What is the difference between a Data Warehouse and a Data Mart?
6. What is Referential Integrity?
7. What is the difference between a Fact Table and a Dimension Table?
8. What is a Factless Fact Table?
9. What is the difference between DROP, TRUNCATE, and DELETE?
10. Write an SQL query to find the 2nd highest salary using a subquery.
11. Write an SQL query to retrieve student names whose f name ends with a ad whose age is greater than 20.
12. Write an SQL query to retrieve student names having 'a' as the 3rd character in the name.
13. What will be the

output of the following query? `SELECT name, age FROM emp1 UNION SELECT name, age, salary FROM emp2;`

14. Write an SQL query to find duplicate records in a table.

15. Python Coding: Print all even numbers from 1 to 10 in the format: 2 : Even 4 : Even

16. Explain ETL concepts.

17. What is a Star Schema?

18. What is a Snowflake Schema?

19. What is a Super Key?

20. What is Normalization and Denormalization?

21. Where do you see yourself in the next 3 years?

22. What is your preferred work location?

23. Given columns `first_name`, `middle_name`, and `last_name`, write an SQL query to display the full name using concatenation.

24. Write an SQL query to display student names in descending order.

25. Transformation tools you know

26. galaxy schema Umme kulsum -shruthi senthilkumar Intro Sdlc Scd Prompt engineering Reporting concepts Foreign key Primary key Unique Can Foreign key be null Y do we use

indentation and write a program to explain What is use to join two list List and array Architecture of data warehouse 2nd highest salary Find employees whose manager name is not available Fact table and dimensional table Drop and truncate What is cloud computing and challenges faced Pyspark Interviewer: Sarique Anwar

1. Self Introduction with Project Overview.
2. Remove duplicate characters from a string.
3. Print prime numbers from 1 to 100 without using loop
4. Find the second-highest salary department-wise using window functions.
5. Explain your project pipelines end to end
6. What are supervised machine learning algorithms?
7. Difference between supervised learning and unsupervised learning.
8. Difference between KNN and K-Means algorithms.
9. Difference between RANK() and DENSE_RANK().
10. Explain the distance formula used in KNN (Euclidean Distance).
11. Limit vs

Offset (SQL) 12. Prompt Engg types 13. TOT with real world example 14. Azure Data Factory vs Databricks 15. Data Validation Techniques

Interviewer : Nisha Kumari Intro College project

In tableau,if we have to connect two data source, what elements we are having What is tableau. Why we use this. Tableau Datatypes SDLC DBMS VS RDBMS JOINS DATABASES SCHEMAS STAR SCHEMA SNOWFLAKE SCHEMA WHICH ONE IS BETTER FOR PROJECT IMPLEMENTATION BETWEEN THOSE SCHEMA Describe SQL COMMANDS DIFFERENCE BETWEEN TRUNCATE AND DELETE ROLLBACK IN TRUNCATE AND DELETE POSSIBLE OR NOT..

Which Join will we will use finding common values Design of Pie chart Disign of Bar chart Situations in Tableau Difference connection of tableau What is measure Primary key Foreign key Difference between primary and foreign key Do you have any questions Interviewer - Ashish

sikdar Self intro And Explain College Project

1) Tell me what u know about tableau 2) What is data warehouse 3) Take 2 array merge it first using for loop and then sort it using second for loop 4) find 2nd highest salary 5) ETL explanation 6) Fibonacci Series

1. Basic Questions

1. What is Tableau?
2. Why is Tableau used?
3. What are the advantages of Tableau?
4. What are the different Tableau products?
5. What is Business Intelligence (BI)?
6. What is Data Visualization?
7. What is a Dashboard?
8. What is a Story in Tableau?
9. What is a Worksheet?
10. What is a Workbook?

2. Data Questions

11. What are Dimensions?
12. What are Measures?
13. Difference between Dimensions and Measures.
14. What are Discrete and Continuous fields?
15. Difference between Blue and Green pills.
16. What is Data Source?
17. What is Live Connection?
18. What is Extract Connection?
19. Difference between Live and Extract.
20. What is Metadata?

3. Charts

21. How do you create a Bar Chart?
22. How do you create a Line Chart?
23. How do you create a Pie Chart?
24. How do you create a Scatter Plot?
25. How do you create a Map?
26. How do you create a Tree Map?
27. What is a Heat Map?
28. What is a Highlight Table?

29. What is a Box Plot?

30. When would you use each chart type?4.

Filters

31. What is a Filter?

32. Types of Filters in Tableau.

33. Difference between Context Filter and Normal Filter.

34. What is Data Source Filter?

35. What is Extract Filter?

36. What is Measure Filter?

37. What is Dimension Filter?

38. What is Top Filter?

39. What is Wildcard Filter?

40. Execution order of Filters.

5. Calculations

41. What is a Calculated Field?

42. How do you create a Calculated Field?

43. What are String Functions?

44. What are Date Functions?

45. What are Number Functions?

46. What are Logical Functions?

47. What are Aggregate Functions?

48. Difference between SUM() and WINDOW_SUM().

49. What is IF statement?

50. What is CASE statement?

6. LOD Expressions

51. What is LOD?

52. Why do we use LOD?

53. Types of LOD.

54. FIXED LOD.

55. INCLUDE LOD.

56. EXCLUDE LOD.

57. Difference between LOD and Table Calculation.

7. Table Calculations

58. What is Table Calculation?

59. Difference between Table Calculation and Calculated Field.

60. Running Total.

61. Moving Average.

62. Percent of Total.63. Difference From.

64. Rank.

65. Index.

66. FIRST().

67. LAST().

8. Joins & Relationships

68. What is Join?

69. Types of Joins.

70. Difference between Join and Relationship.

71. What is Data Blending?

72. Difference between Join and Blend.

73. What is Union?

74. When do we use Union?

9. Dashboard

75. What is Dashboard?

76. Difference between Dashboard and Story.

77. Dashboard Actions.

78. Filter Action.

79. Highlight Action.

80. URL Action.

81. Navigation Button.

82. Device Layout.

83. Containers (Horizontal & Vertical).

84. Floating vs Tiled.

85. Best practices for Dashboard Design.

10. Performance

86. How do you improve Dashboard Performance?

87. What is Performance Recorder?

88. Why is the Dashboard slow?

89. Best practices to optimize Tableau.

11. File Types

90. Difference between .twb and .twbx.

91. What is a .hyper file?

92. What is a .tds file?

93. What is a .tdsx file? 94. How do you publish a Workbook?

12. Tableau Server / Cloud

95. What is Tableau Server?

96. What is Tableau Cloud?

97. Difference between Server and Cloud.

98. How do you share a Dashboard?

99. What are User Roles?

100. What are Permissions?

Scenario-Based Interview Questions

101. You have 10 million records. Which connection will you use: Live or Extract? Why?

102. Your dashboard is slow. How will you improve its performance?

103. A client wants to see the Top 10 customers dynamically. How will you do it?

104. How do you filter one sheet based on another?

105. Which chart would you use to compare sales across regions?

106. Which chart would you use to show trends over time?

107. How would you show Profit Ratio?

108. How do you display KPIs on a Dashboard?

109. What would you do if duplicate records appear?

110. When would you use LOD instead of a Table Calculation?

Frequently Asked Viva Questions

111. What is KPI?

112. What is a Parameter?

113. Difference between Parameter and Filter.

114. What is a Set?

115. Difference between Group and Set.

116. What is Hierarchy?

117. What is Dual Axis?

118. What is Forecasting?

119. What is Trend Line?

120. What is Reference Line?

121. What is Analytics Pane?

122. What is Page Shelf?

123. What is Marks Card?

124. Difference between ATTR(), SUM(), AVG(), MIN(), and MAX().

125. Difference between RANK() and INDEX().

126. Difference between COUNT() and COUNTD().
